                                                                                                                                                                               The invention relates to a mineral of the hsp70 peptides that have at least one mutation or alteration compared with the native sequence, and induce one mutation or alteration compared with the native sequence, and induce a tumour-specific T-cell response. Comprises: (i) amplifying hsp70 encoding DNA from one or more tumours; (ii) cloning the amplified sequences into a vector that can be replicated in bacteria; (iii) sequencing fragments in each cultured bacterial colony to identify any hsp70 mutations, and (iv) determining the immunogenicity of the mutant peptides identified. The peptides, optionally formulated with an agent that induces cellular stress, are used for treatment of cancer, particularly solid cancers (carcinoma, sarcoma, melanoma, neuroblastoma, cancers of head and neck, particularly kidney cancer). The peptides may cancer of head and neck, particularly kidney cancer). The peptides may cancers of head and neck, particularly kidney cancer). The peptides may estimulate inmunogenicity and high specifically interleukin-2, interferon-gamma and tumony necrosis factors (specifically interleukin-2, interferon-gamma and tumour necrosis factors). The meland identifies peptides with high immunogenicity and high specificity for particular HiA (human leucocyte in a cellular should identifies peptides with high immunogenicity and high specificity for particular HiA (human leucocyte in a cellular should the propertion of the cellular should the content of the cellular should the cellular should the cellular should be content of the cellular should the cellular should be content of the cellular should be cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

The present invention relates to a method 10. Liealing a subject maying modulating an immune response to FGF-5 or FGF-5 comprises modulating an immune response to FGF-5 or FGF-5 expression or activity. FGF is a timour associated antigen (TAA). The method is useful for treating or preventing a neoplasm such as prostate carcinoma. Dreast carcinoma, bladder carcinoma, pancreas carcinoma, and renal cell carcinoma (RCC) and diseases such as Hippel-Lindau disease, horseshoe kidneys, adult polycystic kidneys and acquired renal cystic carcinoma (RCC) and disease such as Hippel-Lindau disease, horseshoe kidneys, adult polycystic kidney desses as immunogen in the production of antibodies, which are useful in quantitative immunoassays that determine concentrations of antigen-bearing substances in biological sample, the antibodies may also be used to treat FGF-5 expressing or overexpressing tumours by decreasing FGF-5 activity, as diagnostic agents to monitor the profession or regression of an FGF-5 connection of an FGF-5 charactured or sequence is reverse RT-PCR primer used for cloning therapy for the treatment of neoplasm. FGF-5 cDNA is also useful in gene therapy. The present sequence is reverse RT-PCR primer used for cloning hunchduce HLA-A3 into non-HLA-A3 gene from autologous 1764 RCC to introduce HLA-A3 into non-HLA-A3 expressing cells. The HLA-A3 gene was then subcloned into retroviral vector pRx-TRES-BSF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human secreted protein-encoding gene 33 cDNA clone HTXDC77, SEQ ID NO:43.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; secreted protein; proliferative disorder; cancer; tumour; foetal abnormality; developmental abnormality; haematopoietic disorder; immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; AIDshimer; disease; parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; endocrine stind disorder; pregnancy related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; gene therapy;

                                     QQ
                                                                                                                                                                                                                     AAEO08345-AAD08394 represent CDNAs corresponding to 50 human secreted protein genes and AAEO3998-AAEO3947 represent the proteins they encode. AAEO3996 AAEO3997 represent the protein step encode. CAAEO3996 AAEO3996 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing. CC therapy. Pathological conditions can be diagnosed by determining the early of the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the can include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental conditions and include developing products for the diagnosis or treatment of allergies, hematropoletic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., hematroid arthritis), inflammation, allergies, neurological disorders, diseases, atherosclerosis, cardiovascular disorders (e.g., Alzheimer's disease, cardiovascular disorders, espesis, diabetes, atherosclerosis, cardiovascular disorders, anglogenic disorders, kidney disorders, edisorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to continue of primary tissues, to regenerate tissues, to identify their collure of content ligands or binding partners, and in chemotraxis, and can be used as a food additive or preservative to modify storage properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein-encoding cDNA of the invention.

This invention describes a novel method to identify the interaction between human leukocyte antigen E (HLA-E) and natural killer (NK) cells and/or a subset of T cells, and to target or isolate those cells. Cells and/or subset of T cells, and to target or isolate those cells. Identifying the presence of, separating, killing or inactivating claim or inactivating a sample with HLA-E under CF94/NKG2+ cells compruses (a) contacting a sample with HLA-E under CF binding conditions and (b) detecting binding, separating cells bound to HLA-E surgeted killing on bound cells. The HLA-E property CF binding to CD94/NKG2 receptors on NK cells and a subset of CD8+ T CF compounds, such as antibodies, that interfere with interaction of CF CD94/NKG2 and HLA-E binding can be tailored for specific CD94/NKG2.

CC COMPOUNDS, such as antibodies, that interfere with interaction of CF CD94/NKG2 and HLA-E binding can be tailored for specific CD94/NKG2.

CC CD94/NKG2 and HLA-E binding can be tailored for specific CD94/NKG2.

CC CD94/NKG2 and HLA-E binding can be tailored for specific CD94/NKG2.

CC CD94/NKG2 and HLA-E binding can be tailored for specific CD94/NKG2.

CC CD94/NKG2 and HLA-E binding can be tailored for specific CD94/NKG2.

CC CD94/NKG2 and HLA-E binding can be tailored for specific CD94/NKG2.

CC CD94/NKG2 and HLA-E binding contification of NK cells or a sub population of NK cells or cells, or as up population of NK cells or as a permit of the placental infertion immunodeficiency, and autoimmune collection immunosation of CD4/NKG2 and autoimmune collection immunosation of CD4/NKG2 and autoimmune the invantion have immunosation of CD4/NKG2 and autoimmune immunosation and autoimmune im
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     the invention have immunosuppressive and cytostatic activity. This sequence represents a PCR primer used in the construction of a chimeric DNA containing the leader segment of human HLA-B*0702 and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human leukocyte antigen E binding interaction with CD94/NKG2+ cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         transmembrane and cytoplasmic domains of mouse CD80.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         02-MAR-
                                                                 AA163980
                                              RESULT
                                                                                                This is the histocompatibility antigen (HLA-A2) template. This is fused at the amino terminus to gp350/220 peptide sequence from Epstein Barr virus (EBV). This is used in creating a fusion protein comprising a fusion protein comprising a non-virally encoded cell membrane molecule and a targeting ligand. The fusion protein usually comprises a major histocompatibility complex (MHC) class I or II molecule or beta2 microglobulin and a targeting ligand or one member of a high affinity binding pair, preferably avidin. The HLA-A2 is a MHC class I antigen. The fusion protein on the surface of a gene delivery vehicle can be used in a method for targeting such a gene delivery vehicle to a selected cell type in a warm blooded animal. The pathogenic agents include parasites, bacteria and viruses, cancer and tumour cells. The method can also be used to generate an immune response against an immunogenic portion of an antigen.

The invention relates to human polynucleotides (AAI63803-AAI64012) and the encoded proteins (AAM43447)-AAM3660) useful for preventing, treating cor ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, cone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          is detected by determining the absence of a cytosine nucleotide in the 3' flanking region (see also AATG1647.48) of an HIA-B gene at a position corresponding to nucleotide 445.76 of the HIA-B27 consensus sequence given in AATG1639. Probes and primers (see also AATG1640-46) based on this region can be used in diagnostic assays to detect the genetic predisposition to SNSA, and permit the distinction of B27+ individuals who are resistant to SNSA from B27+ normal individuals who are susceptible (but as yet unaffected) to such diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Genetic predisposition to seronegative spondyloarthropathies (SNSA)
                                                                                                                                                                                              33' flanking region diagnostic for genetic predisposition to SNSA"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                THE DNA may be used to detect the HLA-B 27 gene (opt. mutated) in human genetic material. The HLA-B 27 may be used to detect anti-HLA-B 27 antibodies in human serum. The antibodies may be used to determine HLA-B 27 levels in human serum, e.g. for diagnosis of rheumatic disorders, esp. ankylosing spondylitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from ollgo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed CDNA libraries. Such ESTs are not well suited for isolating CDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs and genomic DNAs. 5' ESTs are also used to obtain full length genemic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping; ss.
                                                                                                                                                                                                                                                                                                 New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

correspond to 5'ESTs and for

```
The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or poly4+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic,
                                                                                                                                                                                                                                                                                                                                                                                                                     gene therapy and chromosome mapping procedures. They are used to obtain
  obtaining cDNAs and genomic DNAs that correspond to 5^{\circ}ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                      upstream regulatory sequences and to design expression and secretion
                                                                               Claim 1; SEQ ID 210; 71pp + CD-ROM; English.

New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures Giordano J; Duclert A, Dumas Milne Edwards J, WPI; 2000-500381/45. P-PSDB; AAG00207.

Claim 1; SEQ ID 211; 71pp + CD-ROM; English.

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. ESTs sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are

```
ö
often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                                                                                                                                                                                                                      Gaps

```

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed CDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures Claim 1; SEQ ID 8354; 71pp + CD-ROM; English. expression and secretion vectors.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human polynuclectides (AAI63803-AAI64012) and the encoded proteins (AAM434497-AAM43660) useful for preventing, treating or ameliotal conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addisson's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative collits; (c) cardiovascular disorders such as myocardial ischemias, chimund healing, controlly a finence of a myocardial ischemias, chimund healing, controlly a finence of a myocardial ischemias, chimund healing, controlly a finence of a myocardial ischemias, controlly and controll
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The invention relates to human polynucleotides (AAIG3803-AAIG4012) and
the encoded proteins (AAM43497-AAM43660) useful for preventing, treating
cor ameliorating medical conditions e.g. by protein or gene therapy. The
genes were isolated from a range of human tissues disclosed in the
correction. The nucleic acids, proteins, antibodies and (ant)agonists
are useful in the diagnosis, treatment and prevention of: (a) cancer,
correct and ovarian cancer and other cancers of the adrenal gland,
concer, bone marrow, breast, gastrointestinal tract, liver, lung, or
cuogenital; (b) immune disorders e.g. Addison's disease, allergies,
autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus,
crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative
colitis; (c) cardiovascular disorders such as myocardial ischaemias;
colitis; (c) neurological diseases e.g. cerebral anoxia and
colitis; (d) wound healing; (e) neurological diseases such as viral, bacterial, fungal
and parasitic infections.

Sequence 3, Application US/09321981

Patent No. 6287839

GENERAL INFORMATION:
APPLICANT: Genor International, Inc.
TITLE OF INVENTION: No. 6287839e1 Cellulase Producing Actinomycetes,
TITLE OF INVENTION: Cellulase Produced Therefrom and Method of Producing Same
FILE REFERENCE: GG540-2

CURRENT APPLICATION NUMBER: US/09/321,981

CURRENT FILING DATE: 1999-05-28

PRIOR APPLICATION NUMBER: 09/104,308

PRIOR FILING DATE: 1999-06-24

PRIOR FILING DATE: 1998-06-24

PRIOR FILING DATE: 1999-06-34

NUMBER: 08/974,042

NUMBER: OSEQ ID NOS: 5

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 3
                   APPLICANT: Jones, Brian E.
APPLICANT: Van Der Kleij, Wilhelmus A.H.
APPLICANT: Van Solingen, Piet
APPLICANT: Weyler, Walter
TITLE OF INVENTION: No. 6187577el Cellulase Producing Actinomycetes,
TITLE OF INVENTION: Cellulase Produced Therefrom and Method of Producing Same
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               49.7%; Score 18.4; DB 4; Length 463; 69.4%; Pred. TITLE OFINNEWINON: Method for Producing Amide Compounds Using a Nitrile
TITLE OFINNEWINON: Hydratase from a Thermophilic Bacillus
FILE REFERENCE: MSU 4.1.489
CURRENT APPLICATION NUMBER: US/09/549,111
CURRENT APPLICATION NUMBER: 00/04.13
PRIOR APPLICATION NUMBER: 09/248,528
PRIOR FILING DATE: 1999-02-10
PRIOR FILING DATE: 1999-02-10
NUMBER OF SEQ ID NOS: 18

//note="Organ: Eye; Vector: pCMVSPORT6; Post-mortem iris
tissue was pooled from 10 individuals ranging in age from
tissue was pooled from 10 individuals ranging in age from
an aliquot of 60ug of total RNA yielded 2.17ug of mRNA. A
directionally cloned cDNA library in the pcMVSPORT6 vector
was constructed at Life Technologies, essentially
following the protocols of the SuperScript Plasmid System
full details of which are contained in the manufacturer's
Instruction manual (http://www.lifetech.com/). First
strand synthesis was carried out using a Not I
primer-adapter [5'-pGACTAGTTCGCGAGGGGCGCCC(T)15-3'
]. Not I/blunt end inserts were cloned into the Not I/EcoR
V sites in the vector. EST analysis was performed on the
unamplified library at the NIH Intramural Sequencing
Center (NISC)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô

Identifying mutant peptides from heat-shock protein 70, for treatment

```
has The invention relates to a method of identifying peptides, derived from hsp70 that stimulate a tumour-specific T cell response (e.g. AAV44199 and AAV4200). Identification of the hsp70 peptides that have at least cone mutation or alteration compared with the native sequence, and induce tumour-specific T-cell response, comprises: (i) amplifying hsp70 encoding DNA from one or more tumours; (ii) cloning the amplified sequences into a vector that can be replicated in bacteria; (iii) sequencing fragments in each cultured bacterial colony to identify any peptides identified. The peptides, optionally formulated with an agent that induces cellular stress, are used for treatment of cancer, that induces cellular stress, are used for treatment of cancer. The peptides may also be used to increase the proportion of tumour-specific cytocoxic T lymphocytes in a cell culture and/or induce these cells to secrete cytotoxic factors (specifically interleukin-2, interferon-gamma and tumour necrosis factor), particularly where the cells are used to stimulate immune defences. The method identifies peptides with high immunogenicity and high specificity for particular HiA (human leucocyte antique) allels. The primars AAZ22706 were used to PCR amplify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; secreted protein; proliferative disorder; cancer; tumour; foctal abnormality; developmental abnormality; haematopoietic disorder; immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; pregnancy-related disorder; pregnancy-related disorder; endoctine disorder; infection; wound healing; vulnerary; cell culture; chemoctaxis; food additive; gene therapy; binding partner identification; ss.
                                                                                                                                                                                                                                                                                                                         Gaps
        This antisense primer and a sense primer (see AAV21516) were designed for the PCR amplification of HLA-B35 cDNA. The PCR product was cloned into PCDNA3, and used with plasmids containing DNA from BB49-SCCHN head and neck squamous cell carcinoma cells to cotransfect COS-7 cells. Transfectants were tested to determine if they could stimulate tumour necrosis factor production by CTL clones 328a/69 and 328a/121. A 2649 bp cDNA clone (see AAV21515) was obtained that codes for a novel tumour rejection antigen precursor that is processed to an antigenic peptide (see AAW5127) that can be used to develop products for the diagnosis and trearment of conditions characterised by HLA-B35 positive cells,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /transl_except= (pos:512..514, aa:Xaa)
